Name: SIMON AXON Year Name: HUNTLY

Registration Number: 200489732

Tick Box: Full-time Part-time Flexible Learning International MBM BITS

Abbreviated Title: DECOM. GRAVITY BASE STRUCTURES

Supervisor's Name: THOMAS DIEFENBACH

OFFICE USE ONLY: Please include comments on Learning / Development, Literature Review / Conceptual Framework, Methodology / Investigation, Overall content and persuasive construction of argument / understanding.

This project is of exceptional excellence. The student has combined theoretical concepts and empirical evidence in an outstanding and even innovative manner.

The introduction identifies the problem very clearly, poses question and aim as clearly developed.

The literature review is of highest level. Concepts such as game theory and stakeholder approach are analysed and discussed in a very differentiated, detailed and thorough manner. Moreover, it is very rare that such concepts, which stem from different strands of reasoning, are seen and being applied in one work. Knowledge of the subject area is outstanding.

The empirical findings are of very high quality and provide very convincing support for the author's argumentation. Moreover, they are based on and analysed on a very sound methodological basis.

The discussion and conclusions are very convincing and persuasive. Overall, the structure, line of argumentation and all formal aspects are simply of exemplary excellence. Well done!
